Group 11 Review Report for Groups 4 and 5
CS 6750 Database Systems Final Projects

Group ID	Project Title	Questions Asked	Their Answer	Overall Evaluation /100
G4	LootCode	How can more companies be added to the system (for problem categorization)?	Companies are not able to be added by anyone other than a super-admin by default - don't want for spam of random companies to be able to be done by regular users.	100
G5	Studying Abroad Consulting Program	How does the group store images in their database (heavy use of images in demo)	The group stores relative file paths to the images and renders them using HTML after querying for those paths.	95

Additional comments for Group 4: Nice layout and design, demonstration had all required elements.

Additional comments for Group 5: Nice design, but I feel like there should be cascading delete with all mentor info - which, from the presentation, is unclear if happens. Furthermore, user accounts cannot be deleted, and seem to have loopholes in the database about them.
